Prof. Tsai teaches mainly in Food Processing. He has been engaged in chitin and chitosan research since the past 20 years., His research area include preparation of chitin and chitosan, solution conformation of chitosan, physical degradation of chitosan, thermosensitive hydrogel, selective adsorption, nanoparticle and fractionation of chitosan by supercritical carbon dioxide. His recent research focused on deacetylation and structural modification of chitin and chitosan by puffing gun. He is a Board member of Taiwan Society for Chitin and Chitosan.
